## NEWS – Increasing the security of your accounts

For increased security user accounts, we have published a new feature user authentications using e-mail.

You will be prompted to verify your email or ask us to activate the feature.

After logging into Webdispecink, you will be prompted to confirm your email for authentication.

Na adresu martin.valovic@eurowag.com byl odeslán ověřovací email.

Prosím dokončete ověření podle uvedených instrukcí v emailu.

## NEWS – Increasing the security of your accounts

Each user must have their own unique e-mail.

The email address must not be empty and cannot be shared between multiple users

If you have multiple users with the same email address, it can only be verified once. Other users must then be given a different - unique - address.

We recommend the following

#### solution:

- Use real email addresses of individual users.
- Create new email addresses for individual users if other options are not appropriate or available.

 Use a.k.a. aliases, if you use a service that supports them (e.g. Gmail).

User accounts marked as API are not subject to email authentication and do not need to be resolved.

Also WD Fleet mobile application user accounts
(tablets) not required

authentication.

If the same verified e-mail is assigned to multiple users (for example, in the WD Fleet mobile application), it is not possible for these users to modify their access rights (you cannot save the new settings after changing the rights settings).

Recommended:

1. Cancel the verification of the original user who has verified the e-mail and give him/her another (or new) address.

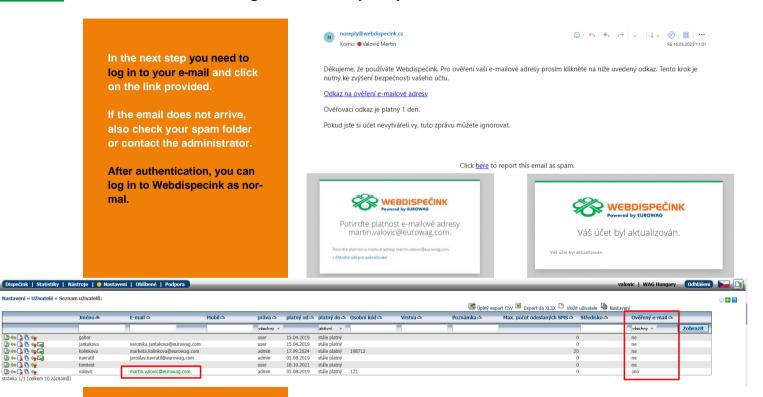

2. Change the e-mail for all users who share this address to unique e-mail, or to an e-mail, that will not be verified in Webdispecink.

Mobile application users do not currently need to have their e-mail verified.

Deleting your e-mail address is not recommended.

## NEWS – Increasing the security of your accounts

🕞 🗫 🐧 🕒 😋

In the next few days, we will be releasing a new version of the WD Fleet application 1.9.1 on the Play Store What's new in version 1.9.1? 1. Perfect drive - a clearer color display of the driver's overall driving style rating.

2. Perfectdrive - view recommendations for drivers to improve their driving style. In the WD Fleet application, the driver is now not only informed of the driving style score, but is also shown three recommendations on what to change during their journeys to achieve a better score.

The displayed recommendation is not dependent on the interval settings for displaying ratings in WD fleet application, but is controlled by the settings in Webdispecink.

In Settings – Company – Company – Sending Perfect Drive Recommendations section - you can specify the interval for sending - daily, weekly, monthly. For example, if the interval is set to monthly, the same recommendation is displayed to the driver for one month.

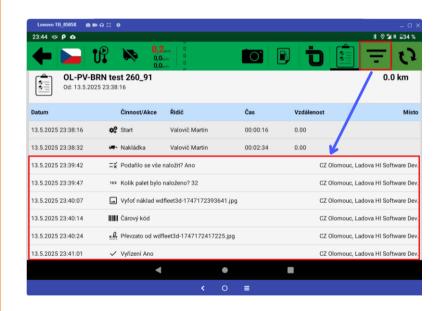

The driver is also informed about the delivery of the new recommendations. This is in the form of a notification on the Perfect drive agenda icon, both in the main menu and in the top icon bar.

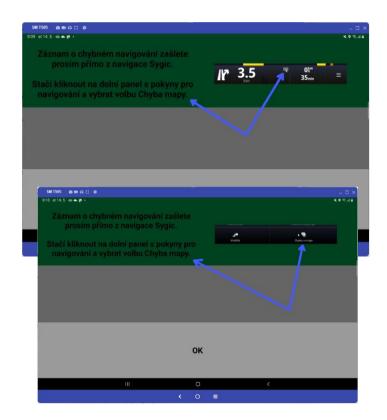

3. log - record of vehicle operation – previously only individual log activities were displayed (full journey, loading, etc.). It is now possible to display filled-in values for completed actions at individual stops.

Clicking on the filter icon in the top bar will open the actions sub-window - the tasks that the driver has completed at each stop, including the values he has entered.

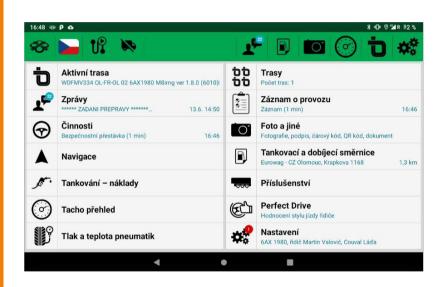

4. Sending a report about navigation error directly from the navigation – when reporting a navigation error, we recommend to send the error directly from the navigation - this way the potential error will reach the map supplier directly.

# 5. System improvements and fixes

- improvement of application logging now we log failures into the protocol by online connection to Sygic traffic navigation servers
- fixing a bug that prevented navigation to a refueling station under certain conditions when an active route was running
- Correction of the link displaying the Privacy and Personal Data Protection Policy
- Fixed a bug where the route was not automatically calculated after the start of the transport

## **END**

We hope that you have found useful information in the articles in this issue of the magazine that will make working with your fleet even easier.

Thank you for your trust.
